

Replacement of Storage

A **multi-store Outdoor recreational Company** with over 90 locations throughout the United States needed to replace a storage system. Abtech had a solution to fit their needs, the **Compellent SC4020**. In addition to this, Abtech has been called on numerous times to replace servers, upgrade their storage multiple times, upgrade their Fibre Channel storage networks twice, converted them to VMware, migrated from the first generation of VMware servers, and provided backup storage and many system administrations tasks.
