

Replacement of Firewalls

Aerospace Firm

An Aerospace firm contacted Abtech to help update their firewalls and create a secure remote work environment. After speaking with the IT staff, **Abtech configured and installed a NextGen Sonicwall NSA** replacing the out-of-support firewall. Secure remote access was provided by the Sonicwall Net Extender application. **A secure FTP server** was also configured as part of the project.

A large Church & pre-school

A large Church and pre-school of approximately 500 members contacted Abtech to help with their Wi-Fi and network. After speaking with the IT staff, it was found that AT&T had installed their managed Wi-Fi service and caused many network issues. **Abtech designed a new network that removed the AT&T Wi-Fi service and installed a new NextGen Sonicwall firewall and reworked the network for better speed, security, and uptime.**
